HEADS

One

Lightweight, portable but powerful, the GR ONE series will surprise you with its quality and incredible power. The ONE series takes up and perfects the philosophy of PURE SOUND, a fundamental characteristic of GR products.

A 4-band equalizer will allow you to sculpt the sound according to your needs but that's not all: you can choose 6 frequencies for the mids, and the deep and bright filters will allow you to add punch and / or definition to the equalization.

Through the "PURE" switch you can exclude filters and equalizer and have a completely flat sound to be combined if necessary with an external equalizer, a very useful function when using different instruments in a concert.

The D.I. of the GR ONE, recognized as one of the best, is perfect for use in professional contexts both live and in the studio. In the GR ONE 1400 we have two power amps of 700 watts each with independent volume!

GR-ONE-350	350W	RRP CHF 529.00	GR-ONE-1400	1400W	RRP CHF 929.00
GR-ONE-800	800W	RRP CHF 799.00			

Power

One 350: 350W RMS 4 ohm, 170W RMS 8 ohm

One 800: 800W RMS 4 ohm, 400W RMS 8 ohm

One 1400: 1400W RMS - 700+700 4 ohm - 350+350 8 ohm

Front Panel

Tuner / Vu-Meter | Input | Aux In | Gain | Deep filter | Low -Mid
 Low | Mid High - High | Bright filter | 3 freq for mid Low | High |
 Pure Sound | Volume DI (antibump) | Headphone master - output
 | Master | Mute

Dimensions

One 350: W26,5 x D22 x H5,5 cm | Weight: 1,8 kg

One 800: W26,5 x D22 x H5,5 cm | Weight: 2,35 kg

One 1400: W31 x D22 x H5,5 cm | Weight: 2,85 kg

Rear Panel

Input 230-115v (auto selectable) | 9 Volt 300mA | Send/Return |
 Pre/Post DI | GND lift | DI Output | Speakon Ch1 | Speakon Ch2 |
 Fan (Studio/Live mode)

MINI One

The MINI ONE is the smallest head of the ONE series but sound and quality remain the same as in the whole ONE series.

A 3-band equalizer will allow you to sculpt the sound according to your needs but that's not all: you can choose 2 frequencies for the mids, and the deep and bright filters will allow you to add punch and / or definition to the equalization.

The headphone output and the aux-In allows you to connect an external sound source (Tablet, Smartphone) and play wherever you are.

The D.I. of the GR ONE series, recognized as one of the best, is perfect for use in professional contexts both live and in the studio.

There is no reason not to have a MINI ONE!

GR-MiniOne

350W

RRP CHF 429.00

Power

Headphone | Master | Pre/Post | Deep - mid Freq 400/800hz |
Bright | Mute

Rear panel

Input 230-115v (auto selectable) - DI Output - Speakon

Dual

The GR DUAL is a head created for the modern and demanding bass player with a flexibility never seen before on a bass amplifier. The Dual features two separate channels, one of which is completed by a professional overdrive for slight saturations or massive distortions. Each channel is provided with a 4 band eq with 6 selectable frequencies on the mids, deep and bright filters. The DUAL offers the possibility to connect two instruments (two bass or one bass and one keyboard) but also one instrument with the possibility of using the two equalizations alternatively or simultaneously.

The system is completed by two D.I. on the back to send two separate signals even when using only one instrument that mixes the two equalizations (for example, you can mix a clean and a distorted sound in your cabinet and send the two signals separately to the sound engineer).

Dual is completed by a dedicated pedalboard that allows you to comfortably manage all the functions as an alternative to the controls on the head.

Groove

The perfect combination of classic and modern, the GR GROOVE series will surprise you with its quality and incredible power and an incredible tube preamp with 2 pcs 12AX7. The GROOVE series takes up and perfects the philosophy of PURE SOUND, a fundamental characteristic of GR products, with the possibility of adding the characteristic sound only valves can give you.

A 4-band equalizer will allow you to sculpt the sound according to your needs but that's not all: you can choose 4 frequencies for the mids, and the deep and bright filters will allow you to add punch and / or definition to the equalization. Through the "PURE" switch you can exclude filters and equalizer and have a completely flat sound to be combined if necessary with an external equalizer, a very useful function when using different instruments in a concert.

Two Aux-Ins, a standard front one that you can listen to directly in the speaker, and one on the back, with an XLR input that will allow you to have this signal only through the headphone output. You can use the GROOVE as a mixer between you and the PA.
